## FOREWORD

Public debt management of the State of Côte d'Ivoire has significantly improved over the last ten years. After benefiting from debt relief and cancellations that occurred at the completion point of the HIPC initiative in June 2012, the State of Côte d'Ivoire has embarked on a cautious borrowing strategy and active public debt management, through relevant actions implemented by the Government. Significant reforms have thus been undertaken in order to regulate public borrowing, in accordance with WAEMU Regulation R09.

### ■ Institutional and Regulatory Framework

The State of Côte d'Ivoire has an organic law on national debt policy and public debt management. This law was adopted by both houses of parliament (National Assembly and Senate) on June 6, 2024.

The establishment of the National Committee on Public Debt (CNDP), an interministerial committee responsible for monitoring and evaluating the implementation of public debt policy and the State's debt management objectives.

The creation of a unified debt and treasury management entity for the State, organized into front, middle, and back offices (General Directorate of Financing). This entity, under the supervision of the Minister of Economy, Finance and Budget, is the sole entity responsible for negotiating and mobilizing State resources as well as managing the State's treasury and public debt.

### ■ Treasury and Public Debt Management

The MTDS, DSA, and borrowing plans are regularly prepared, updated, and validated by the National Committee on Public Debt. The MTDS is annexed to the Finance law by the Government of Côte d'Ivoire. The strategy is based on (i) prioritizing concessional and semi-concessional resources from bilateral and multilateral lenders, (ii) financing in local currency, particularly through Treasury bond issuances in the regional market, contributing to the development of domestic capital markets, and (iii) accessing international bond and banking markets when conditions are favorable.

The continuous improvement of Côte d'Ivoire's perception by technical and financial partners and the quality of the State's credit rating remain a priority for the Government. The results are evident in recent reports from sovereign credit risk rating agencies. Côte d'Ivoire is rated Ba2 by Moody's (stable outlook), BB by Fitch Ratings (stable outlook) following the upgrade obtained in last December, and BB by Standard & Poor's (stable outlook). With these ratings, it ranks among the best-rated countries in sub-Saharan Africa. Moreover, since 2012, Côte d'Ivoire has maintained a "moderate" risk of debt distress classification in the IMF's debt sustainability analyses (DSA) with an upgrade to "low" risk expected in the near term.

The diversification of funding sources and instruments is also a real goal of the State to effectively meet its financial needs, particularly through the mobilization of innovative financing complementary to traditional funding.

Since its return to the Eurobond markets in 2014, Côte d'Ivoire has established access to international capital markets and diversified its investor base in both Euro and Dollar denominations. Côte d'Ivoire has successfully completed twelve (12) Eurobond operations between 2014 and February 2026. The country also has a Sustainable Finance Framework for the mobilization of ESG resources (Loans and bonds). Besides, Côte d'Ivoire reached a new milestone with the publication of its Sustainability-Linked Finance Framework that enabled the Republic to conduct its first Sustainability-Linked Loan in 2025.

Furthermore, Côte d'Ivoire's financing strategy is accompanied by regular proactive management of the public debt portfolio to optimize its cost-risk profile. This strategy notably involves conducting liability

management operations in both external and domestic markets and implementing currency hedging. This was the objective of the Liability Management exercises carried out on external debt in January 2024 and March 2025, which allowed for the replacement of more expensive existing debt with new longer-maturity lower-cost debt.

On March 26, 2025, the Republic of Côte d'Ivoire successfully issued a XOF-offshore bond for a total amount of XOF 220 billion (c. EUR 335 million), placed with international investors. This transaction contributes to the diversification of the country's funding sources and the development of its domestic capital markets. This issuance represents a first of its kind in Africa and marks a significant milestone in the Republic's efforts to deepen local capital markets. It also reaffirms Côte d'Ivoire's leadership in financial sophistication and innovation within the WAEMU region and across the African continent.

This operation complements the Eurobond issuance carried out on Tuesday, March 25, 2025, for an amount of USD 1.75 billion. The USD-denominated issuance benefited from a 6.4% rate, following the implementation of an EUR-USD currency hedge. Part of the bond proceeds was allocated to a liability management exercise aimed at improving the debt amortization profile, which included a public tender offer on two Eurobond series.

Moreover, on 18 February 2026, Côte d'Ivoire raised USD 1.3 billion through a 15-year Eurobond and recorded strong oversubscription (approximately five times, with orders amounting to USD 6.3 billion), at a competitive yield (5.39% after hedging). This represents the lowest yield achieved by Côte d'Ivoire, and more broadly in Sub-Saharan Africa, over the past five years. The transaction is intended to finance the 2026 budget, thereby confirming the improvement in the country's sovereign credit profile. It should be noted that the Republic simultaneously executed a USD–EUR hedge on the entire transaction, in line with its prudent public debt management strategy, which includes the mitigation of foreign exchange risk.

As such, these transactions mark Côte d'Ivoire's transition into a higher credit category, reflecting the latest upgrades to its sovereign rating and placing the country at the doorstep of Investment Grade status. The success of these operations, along with the renewed confidence of international investors in Côte d'Ivoire, despite a global context marked by high volatility, demonstrates the strength of the Republic's credit profile, which holds the third-highest credit rating in Africa. Furthermore, these results also demonstrate the effectiveness of the investor relations strategy implemented by the country over recent years.

Finally, to meet its commitments, particularly those related to the IMF's General Data Dissemination System (GDDS), the Statistical Debt Bulletin is produced on a quarterly basis. This edition presents the status of public debt, as of the end of March 2026.

## **A. DATA COVERAGE**

The public debt considered in this Bulletin is at the Central Government level. It covers both domestic and external debt, excluding debt eligible for the C2D with France and the PCD with Spain.

Information on state-guaranteed debt is also provided in Section IV of this bulletin.

## **B. METHODOLOGY**

The purpose of the Statistical Bulletin is to present data on Côte d'Ivoire's public debt on a quarterly basis. It is composed of eleven (11) tables presenting Côte d'Ivoire's debt under various angles, taking into consideration the country's public debt portfolio specificities and economic indicators.

This edition covers the period from January 1<sup>st</sup> to March 31<sup>st</sup> 2026, with a summary of annual data from 2022 to 2025.

The main currencies used are USD and the WAEMU area CFA Franc (XOF). Currency conversions are realized in accordance with the following rules:

- stocks are converted using the exchange rate prevailing on the evaluation date;
- flows are converted using the exchange rate prevailing on the transaction date;
- projections are converted using the exchange rate in effect at a date specified in the table.

The outstanding debt amounts presented in this bulletin are expressed in nominal value.

## **C. SOURCES**

The aggregated data are taken from the DMFAS database, in which information available in the form of legal or official administrative documents is recorded.

The exchange rates used for the conversion of currencies into national currency are taken from the IMF database at the end of March 2026. The euro has a fixed parity with the XOF, which is the local currency.

Macroeconomic data are taken from the General Directorate of Economy (DGE).

## I.GENERAL OVERVIEW

Chart 1: Evolution of the central government debt stock (in XOF bn) and debt-to-GDP ratio

This trend can be attributed to the government's desire to fast-track the structural overhaul of the Ivorian economy via the financing of projects set out in the National Development Plans (NDPs).

However, the debt-to-GDP ratio remaining below the regional threshold of 70% is attributable to the strong macroeconomic performance recorded and the prudent management of public debt.

<sup>1</sup> The Contrat de désendettement et de développement (C2D) is a development financing mechanism that involves converting repaid debt into grants for projects chosen by mutual agreement between Côte d'Ivoire and France.

<sup>2</sup> The purpose of the Conversion de dette en projet de Développement (PCD) signed with Spain is to contribute to the economic and social development of Côte d'Ivoire through the creation of a Development Fund to be fed by repayments from Côte d'Ivoire, with a view to financing investment projects in the energy and water sectors. This is based on the same mechanism as the C2D.

Source: DGF

Table 3 presents the evolution of the main debt ratios and risk indicators of the debt portfolio from 2022 through end-March 2026.

The debt ratio stood at 56.0% as of end-March 2026, remaining below the WAEMU threshold set at 70% of GDP.

Total debt is largely contracted at fixed interest rates and is not significantly exposed to foreign exchange risk. Refinancing risk also remains low, owing to regular Liability Management (LM) operations.

Table 4 shows that the debt portfolio is mainly composed of medium- and long-term debt.

This outcome is consistent with the debt strategy adopted by the Government and annexed to the Finance Law, with the objective of ensuring optimal coverage, by reducing costs and minimizing risks, of the financing needs generated by Côte d'Ivoire's dynamic economy.

It is also supported by active debt management aimed at managing and controlling risks related to the debt portfolio, while promoting the diversification of financing sources.

### **Focus on Recent Financing Operations**

#### **International Bond Markets**

In March 2025, the Republic of Côte d'Ivoire completed a XOF-offshore bond issuance for a total amount of XOF 220 billion (approximately EUR 335 million), placed with international investors, along with a USD 1.75 billion Eurobond issuance. This issuance was primarily aimed at liability management to improve the debt amortization profile, and included a tender offer on two series of Eurobonds.

In July 2025, the Republic of Côte d'Ivoire issued, for the first time in its history, a bond on the Japanese market, amounting to JPY 50 billion, with a 10-year maturity and a competitive coupon of 2.3%. The transaction benefited from strong interest from Japanese institutional investors, reflecting their confidence in Côte d'Ivoire's credit profile. It was also partially guaranteed by the Japan Bank for International Cooperation (JBIC), rated A+, thereby strengthening the credibility of the issuance.

In February 2026, Côte d'Ivoire raised USD 1.3 billion through a 15-year Eurobond, which attracted strong oversubscription (approximately five times, with orders reaching USD 6.3 billion). The transaction was secured a competitive coupon of 5.39% after hedging, the lowest achieved by the country, and more broadly by Sub-Saharan Africa, over the past five years.

#### **Conventional Debt**

As of end-March 2026, four (04) external financing agreements had been signed. With respect to external borrowing resources, a total amount of XOF 357.5 billion was disbursed for project loans.

#### **Domestic market**

Issuances of government securities on the money and capital markets made it possible to mobilize XOF 2,168.5 billion. These resources include XOF 1,843.9 billion in Treasury bonds issued through auctions, XOF 119.3 billion in Treasury bills, and XOF 205.3 billion in syndicated bond issuances. The domestic market continues to show steady improvement, reflecting the efforts undertaken by the BCEAO, notably in terms of liquidity injections and successive 25-basis-point reductions in the policy rate in June 2025 and March 2026, which lowered the rate to 3.0% as of March 2026.

## II. EXTERNAL DEBT

**Chart 2: Evolution of outstanding external debt by type of creditor**

Charts 2 and 3 show that the outstanding external debt, by type of creditor over the period from 2022 to end-March 2026, is predominantly composed of multilateral debt and international securities (Eurobonds).

Table 5 presents the evolution of debt service from 2022 to March 2026.

**Chart 4: External debt by currency as of March 2026**

Source: DGF

Charts 4 and 5 present the composition of the external debt portfolio by currency and by interest rate type.

As of end-March 2026, a significant share of the debt is denominated in euros and is predominantly contracted at fixed interest rates.

**Chart 5: External debt by type of rate**

Source: DGF

As part of its proactive public debt management strategy, Côte d'Ivoire has implemented EUR-USD foreign exchange hedging operations to increase the predictability of external debt service. Given the fixed parity between the CFA Franc and the Euro, these operations consist in swapping part of the debt service denominated in USD into Euro, via derivative instruments. These operations target the main dollar-denominated exposures of the public debt portfolio, namely Eurobonds and as well as some bilateral Loans.

Côte d'Ivoire completed an inaugural transaction in 2018 covering a notional amount of USD 1.4 billion in debt service over the 2019-2022 period. A second transaction was carried out in 2019, for around USD 720 million notional over the period 2020-2024. In terms of innovation, the Eurobond transaction carried out in January 2024 represents the first raising in sub-Saharan Africa carried out simultaneously with a Dollar-Euro currency hedging transaction.

Moreover, the USD-denominated transaction carried out in March 2025 for an amount of USD 1.75 billion benefited from a 6.4% rate following the implementation of a euro-dollar currency hedge.

Furthermore, in February 2026, the transaction, amounting to USD 1.3 billion, was executed at an interest rate of 5.39% following the implementation of a euro-U.S. dollar foreign exchange hedge.

## **GLOSSARY**

### **COMMISSION**

This term generally refers to the amount paid to an agent, an individual, a broker or a financial institution who arranged a transaction involving the sale or purchase of goods or services. In the banking industry, agents and brokers are usually compensated under a system that allows them to charge a certain percentage (commission) of the premiums they generate. It is also the payment made for a service, such as an engagement fee, an agent fee and a management fee.

### **CREDITOR**

Organization or entity which provides goods and services that are reimbursable under the terms of a Loan agreement.

### **BILATERAL CREDITORS**

These are governments. Their claims consist of Loans granted or guaranteed by the government or by official bodies such as export credit agencies. Some official creditors take part in debt rescheduling under the Paris Club.

### **MULTILATERAL CREDITORS**

Multilateral institutions such as the IMF, the World Bank Group, and regional multilateral development banks, such as the African Development Bank Group.

### **PRIVATE CREDITORS**

A creditor that is not a government or public sector agency. These include private bond investors, banks and other private financial institutions, manufacturers, exporters and other suppliers of goods who hold a financial claim.

### **EXTERNAL DEBT**

Amount of liabilities to non-residents.

### **DOMESTIC DEBT**

Amount of liabilities to residents.

### **AVAILABLE COMMITMENTS**

The amount of a debt which can still be drawn or disbursed.

### **OUTSTANDING DEBT**

The amount which has been disbursed but not yet repaid or forgiven. In other words, it is the total of actual disbursements less principal repayments.

### **TREASURY BONDS**

Medium and long-term securities issued by a government, a local authority or a company. There are several types of bonds, namely: Treasury Bonds (OATs), Obligations du Trésor par Adjudication (OTAs) and bonds issued through public offerings. These securities are issued through auction or syndication.

### **PRINCIPAL**

Capital invested or money loaned or borrowed, possibly bearing interest.

### **RESTRUCTURING**

Restructuring is the modification of the debt repayment terms. It can be carried out either by modifying the contractual terms of the existing debt (this is called "rescheduling"), or by exchanging the debt with a new instrument (in particular, through "refinancing"), or by partial or total cancellation of the debt (debt forgiveness).

#### **DEBT SERVICE**

Any payment to be made on account of principal, interest and fees on a loan.
