FOREWORD

Côte d'Ivoire's public debt position has considerably improved following debt relief and cancellation at the completion point of the HIPC initiative in June 2012. Key reforms have been undertaken to control indebtedness, increase domestic resource mobilization and free up budgetary space to finance the National Development Plan (NDP).

Côte d'Ivoire's financing strategy is underpinned by the recommendations of the Medium-Term Debt management Strategy (MTDS), which is updated annually and annexed to the Budget Law. This strategy is based on (i) a prioritization of concessional and semi-concessional resources from bilateral and multilateral donors, (ii) recourse to local currency funding contributing to the development of domestic capital markets, through the issuance of Treasury securities on the regional market, and (iii) recourse to the international bond and banking markets, when conditions are sufficiently conducive.

Since its return to the Eurobond markets in 2014, Côte d'Ivoire has built an established access to international capital markets, as well as a diversified investor base both in Euro and Dollar. Côte d'Ivoire has successfully completed seven Eurobond transactions between 2014 and February 2021.

Côte d'Ivoire's financing strategy is also accompanied by proactive public debt management, with a view to optimizing its cost-risk profile. This strategy relies in particular on liability management operations on the external and domestic markets and on the implementation of foreign exchange hedges.

These efforts have enabled Côte d'Ivoire to maintain a "moderate" risk of debt distress classification since 2012, as part of the IMF's debt sustainability analyses (DSA). In addition, Côte d'Ivoire stands amongst the best-rated countries in Sub-Saharan Africa, being rated Ba3 by Moody's (stable outlook), BB- by Fitch (stable outlook) and BB- by Standard & Poor's (stable outlook).

Finally, the Ivorian authorities aim to align public debt management with international standards. The government will thus produce a quarterly Public Debt Statistical Bulletin in line with international standards, and in particular to the GDDS standards.

The Statistical Bulletin will contribute to the promotion of good governance, the development of national and international capital markets and the strengthening of government-donor relations.

A. DATA COVERAGE

The public debt considered in this Bulletin is at the Central Government level. It covers both domestic and external debt, excluding debt eligible for the C2D with France and the PCD with Spain.

Information on state-owned enterprises debt and state-guaranteed debt is also provided in Section IV of this bulletin.

B. METHODOLOGY

The purpose of the Statistical Bulletin is to present data on Côte d'Ivoire's public debt on a quarterly basis. It is composed of thirteen (13) tables presenting Côte d'Ivoire's debt under various angles, taking into consideration the country's public debt portfolio specificities and economic indicators. The Statistical Bulletin is not an analytical document.

This edition covers the period from January 1st to March 31st, 2023, with a summary of annual data from 2019 to 2022.

The main currencies used are USD and the WAEMU area CFA Franc (XOF). Currency conversions are realized in accordance with the following rules:

- stocks are converted using the exchange rate prevailing on the evaluation date;
- flows are converted using the exchange rate prevailing on the transaction date;
- projections are converted using the exchange rate in effect at a date specified in the table.

The outstanding debt amounts presented in this bulletin are expressed in nominal value.

C. SOURCES

The aggregated data are taken from the DMFAS database, in which information available in the form of legal or official administrative documents is recorded.

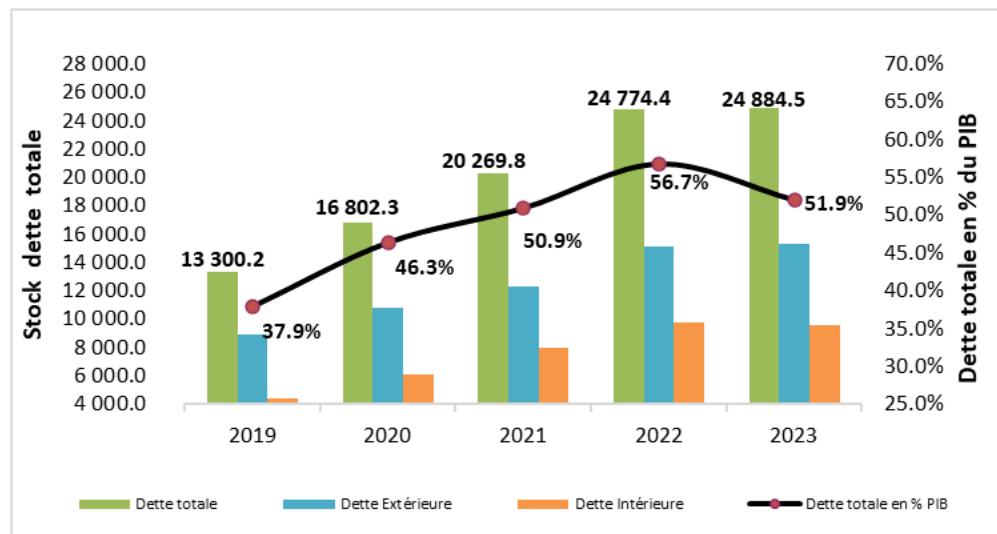

The exchange rates used for the conversion of currencies into national currency are taken from the IMF database at the end of March 2023 (International Financial Statistics). The euro has a fixed parity with the XOF, which is the local currency.

Macroeconomic data are taken from the Direction Générale de l'Economie (DGE).

I. GENERAL OVERVIEW

Chart 1: Evolution of the central government debt stock and debt-to-GDP ratio

In XOF bn

The increase in public debt over the period reflects the financing of the large public investment program included in the 2016-2020 and 2021-2025 NDPs.

However, the relatively small increase in the debt/GDP ratio, below the community threshold of 70%, is due to strong macroeconomic performance.

Table 2 shows changes in outstanding debt by instrument, maturity, and currency.

The debt portfolio consists mainly of medium- and long-term debt. Market instruments continue to predominate.

¹ The Debt Reduction and Development Contract (C2D) is a development financing mechanism which consists in the conversion of repaid debt into grants for projects, chosen by mutual agreement between Côte d'Ivoire and France.

² The Debt to Development Program (PCD) concluded with Spain, which aims to contribute to the economic and social development of Côte d'Ivoire through the creation of a Development Fund that financed by the repayments of Côte d'Ivoire, in order to invest in projects in the energy and water sectors.

Table 3: Main ratios and debt indicators

	2019	2020	2021	2022	2023
Debt ratios

Source : DDPD

Table 3 shows changes in the main debt ratios and risk indicators for the debt portfolio from 2019 to the end of March 2023.

Debt interest represents an average of 13.2% of budget revenues excluding grants over the period 2019-2022.

The debt-to-equity ratio stands at 51.9% at the end of March 2023.

Memorandum items

Focus on recent financing operations

International bond markets

In February 2021, the Republic of Côte d'Ivoire reopened its euro-denominated 2032 and 2048 Eurobond series for EUR 850 million. The series with a final maturity of 2032 and an average residual maturity of around 10 years was reopened at a yield of 4.30%, constituting the lowest yield historically obtained by Côte d'Ivoire on the Eurobond markets. The series with a final maturity of 2048 and an average residual maturity of around 26 years was reopened at a yield of 5.75%, compared with a yield of 6.625% when it was issued in March 2018. This reopening operation notably enabled the average maturity of Ivorian public debt to be extended at favorable market conditions. This operation recorded an order book of around EUR 2.9 billion, representing a cover ratio of 3.4 times, as well as negative issue premiums of c.3 basis points and c.5 basis points respectively on the 2032 and 2048 series.

Lenders

At the end of March 2023, sixteen (16) financing offers had been the subject of signed credit agreements. External borrowing resources amounted to FCFA 344.6 billion and concerned project loans.

Domestic market

Public securities issues on the money and bond markets raised FCFA 221.8 billion, in line with forecasts. This amount includes FCFA 53.0 billion in Treasury bonds issued by auction, FCFA 59.0 billion in Treasury bills and FCFA 109.8 billion in bond proceeds raised through syndication (TPCI loans).

II. EXTERNAL DEBT

Table 4: Outstanding external debt by type of creditor

In XOF bn

Table 6 shows the evolution of external debt service by type of creditor over the period 2017 to end-March 2023.

Chart 3: External debt by currency as of March 31, 2023

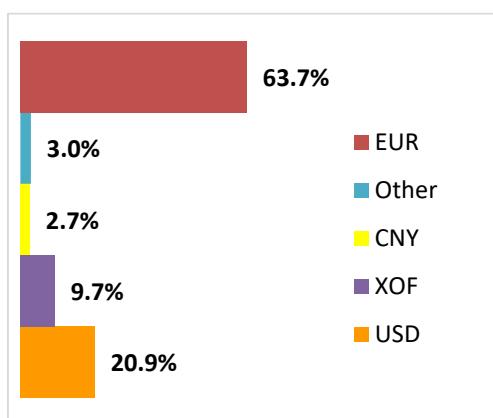

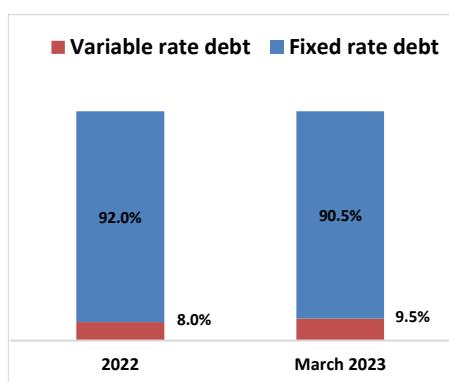

Chart 4: External debt by type of interest rate as of March 31, 2023

Graph 3 shows the composition of the external debt portfolio by currency. The large share of EUR-denominated debt of 63.7% at the end of March 2023 is explained mainly by Eurobond issues.

Graph 4 shows the change in floating rate debt, albeit very small.

Source: DDPD

As part of its proactive public debt management strategy, Côte d'Ivoire has implemented EUR-USD foreign exchange hedging operations to increase the predictability of external debt service. Given the fixed parity between the CFA Franc and the Euro, these operations consist in swapping part of the debt service denominated in USD into Euro, via derivative instruments. These operations target the main dollar-denominated exposures of the public debt portfolio, namely Eurobonds and as well as some bilateral loans.

Côte d'Ivoire completed an inaugural transaction in 2018 covering a notional amount of USD 1.4 billion in debt service over the 2019-2022 period. A second transaction was carried out in 2019, for around USD 720 million notional over the period 2020-2024.

Table 7 shows the evolution of the projected external debt service based on the amount outstanding at the end of March 2023, by type of creditor, excluding C2D maturities and exceptional charges.

Chart 5: External debt service profile over the next five (5) years

In XOF bn

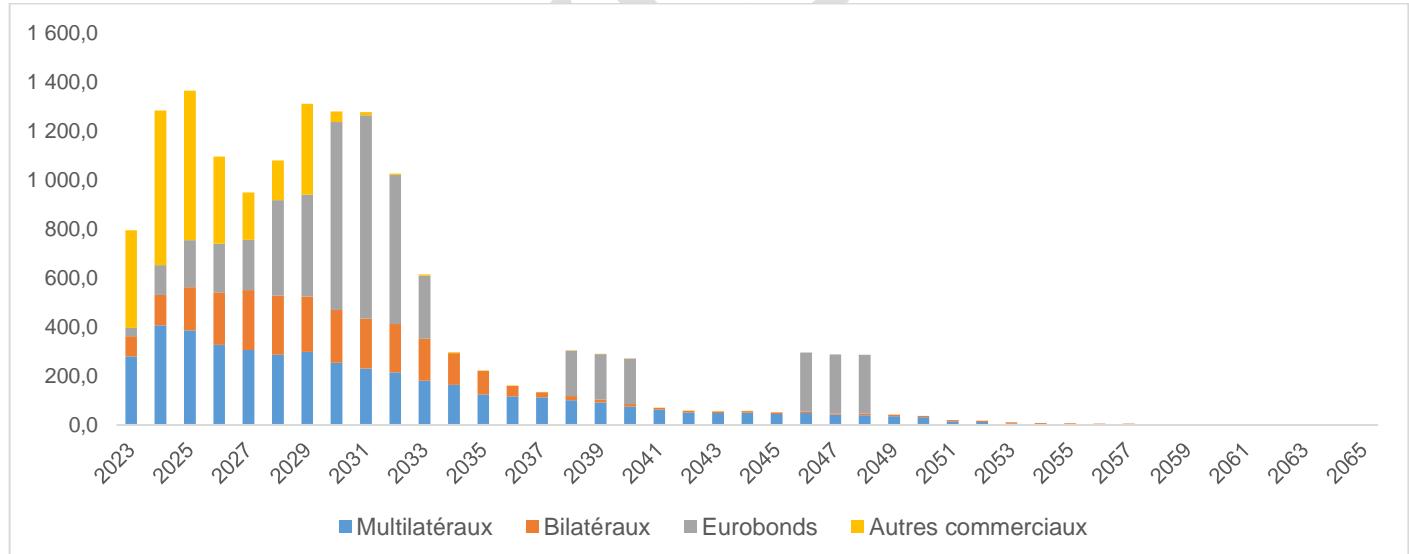

Foreign debt servicing is expected to rise over the next five (05) years. This is due to substantial repayments to commercial and multilateral

Source: DDPD

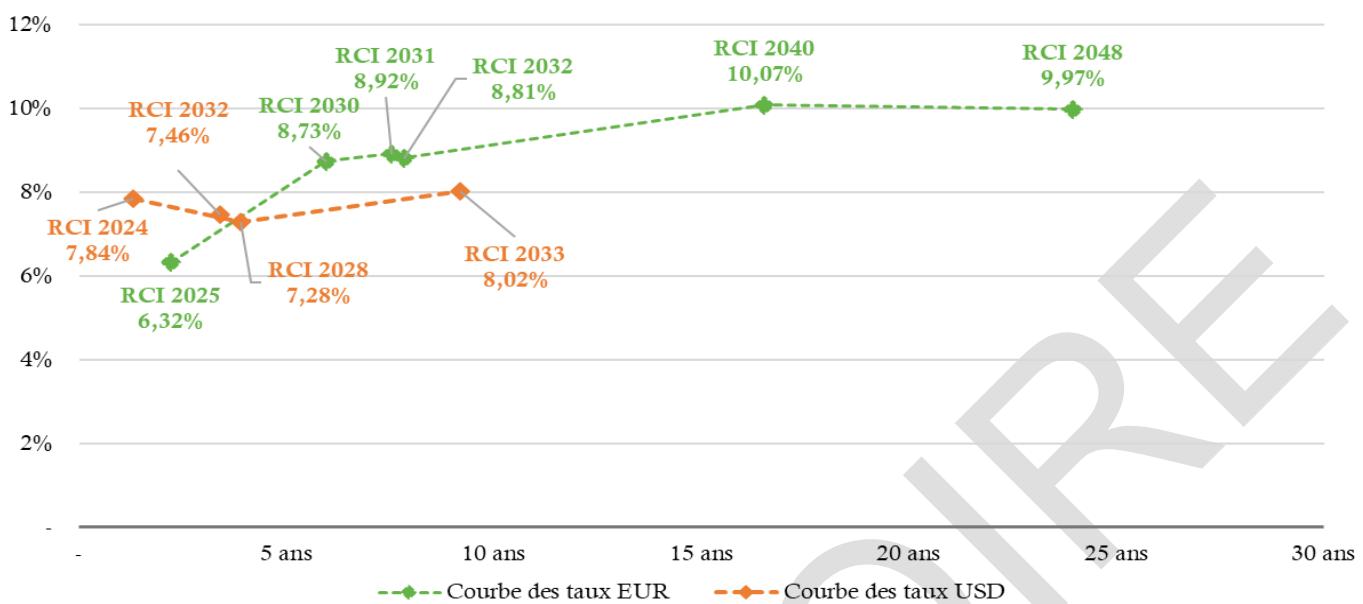

Chart 6: Amortization profile of the principal on external debt

In XOF bn

Source: DDPD

Chart 7: Côte d'Ivoire Eurobonds' yield curves (EUR and USD) as of December 31, 2021

Methodological note. Yield curves estimated based on the secondary yields of Côte d'Ivoire's Eurobonds and their average residual maturity. Côte d'Ivoire's USD 2032 series is considered as an "outlier", given its specific characteristics (linear amortization with a step-up and early buy-back option at par)

Source. Bloomberg

Additional considerations regarding the Eurobonds' secondary performance are available in Appendix B.

III. DOMESTIC DEBT

Table 8: Domestic debt by tranche and type of interest rate

Source: DDPD

The amounts mobilized totaled US\$3,000,000,000 and €5,875,000,000.

To be noted that the February 2021 transaction consisted in the reopening of the Eurobond series EUR 2032 and EUR 2048, issued respectively in 2020 and 2018.

The 2017, 2019 and 2020 issues enabled the partial buy-back of the Eurobond series maturing in 2032, 2024 and 2028 (USD) and 2025 (EUR).

- In 2017, the 2032 and 2024 Eurobonds have been bought-back for \$750m.
- In 2019, the 2032 and 2024 Eurobonds have been bought-back for \$1,112.3m and the 2025 Eurobond for €300m.
- In 2020, the 2032 and 2028 Eurobonds have been bought-back for \$486m and the 2025 Eurobond for €85m.

IV. STATE OWNED ENTERPRISES DEBT

The stock of government-guaranteed debt stood at CFAF 557.6 billion at the end of March 2023, representing 1.2% of GDP, compared with CFAF 632.9 billion at the corresponding period in 2022, or 1.4% of GDP.

GLOSSARY

COMMISSION

This term generally refers to the amount paid to an agent—an individual, a broker or a financial institution—who arranged a transaction involving the sale or purchase of goods or services. In the banking industry, agents and brokers are usually compensated under a system that allows them to charge a certain percentage (commission) of the premiums they generate. It is also the payment made for a service, such as an engagement fee, an agent fee and a management fee.

CREDITOR

Organization or entity which provides goods and services that are reimbursable under the terms of a loan agreement.

BILATERAL CREDITORS

These are governments. Their claims consist of loans granted or guaranteed by the government or by official bodies such as export credit agencies. Some official creditors take part in debt rescheduling under the Paris Club.

MULTILATERAL CREDITORS

Multilateral institutions such as the IMF, the World Bank Group, and regional multilateral development banks, such as the African Development Bank Group.

PRIVATE CREDITORS

A creditor that is not a government or public sector agency. These include private bond investors, banks and other private financial institutions, manufacturers, exporters and other suppliers of goods who hold a financial claim.

EXTERNAL DEBT

Amount of liabilities to non-residents.

DOMESTIC DEBT

Amount of liabilities to residents.

AVAILABLE COMMITMENTS

The amount of a debt which can still be drawn or disbursed.

OUTSTANDING DEBT

The amount which has been disbursed but not yet repaid or forgiven. In other words, it is the total of actual disbursements less principal repayments.

TREASURY BONDS

Medium and long-term securities issued by a government, a local authority or a company. There are several types of bonds, namely: Obligations Assimilables du Trésor (OATs), Obligations du Trésor par Adjudication (OTAs) and bonds issued through public offerings (*Appel public à l'épargne*). These securities are issued through auction or syndication.

PRINCIPAL

Capital invested or money loaned or borrowed, possibly bearing interest.

RESTRUCTURING

Restructuring is the modification of the debt repayment terms. It can be carried out either by modifying the contractual terms of the existing debt (this is called "rescheduling"), or by exchanging the debt with a new instrument (in particular, through "refinancing"), or by partial or total cancellation of the debt (debt forgiveness).

DEBT SERVICE

Any payment to be made on account of principal, interest and fees on a loan.
