| Population (m) | 20.6 |
| International reserves | 5.0 |
| Net external debt (% GDP) | -11.7 |
| Central government total debt (% GDP) | 42.9 |
| CG foreign-currency debt | 9.3 |
| CG domestically issued debt (XOFbn) | 2,805 |

Key Rating Drivers

Positive Recent Track Record: Côte d'Ivoire's 'B' rating with a Positive Outlook is supported by its track record on reforms and economic policy since its return to political stability from mid-2011. Economic performance has been impressive, and significant external debt relief has markedly improved the sovereign's debt profile. The rating is constrained by the country's recent history of political instability and debt default and its weak structural indicators (including GDP per capita, business environment and governance).

Elections Will Test Stability: After a decade of recurrent conflict, the stabilisation in the political environment has led to a marked improvement in the security situation since 2011. A probable scenario is that the current president will be re-elected in October 2015 as he is credited with achieving peace and significant economic gains (real income per capita up 12% since 2011), and that stability will prevail. Given recent history, however, there are risks of renewed conflict, and the 2015 elections will be a key test of Côte d'Ivoire's return to stability.

Strong Economic Performance: High real GDP growth, at 9.8% in 2012 and 9.1% in 2013, has been driven by the return to political stability, large public and private investments to rebuild infrastructure, and structural reforms. The current National Development Plan targets infrastructure (roads, bridges and dams) and will support the private sector and regional integration. Fitch expects GDP growth to remain strong, at 9.0% in 2014 and 8.5% in 2015. The main risk to the growth scenario is renewed insecurity/conflict that would affect confidence.

Poor Debt Service History: Côte d'Ivoire restructured external and domestic debt in 2012 following the 2010/2011 conflict when it missed three coupon payments on its Eurobond and stopped servicing domestic debt. By end-2012, it had normalised relations with all creditors. Public debt, at 42.9% of GDP in 2014, is in line with the 'B' median (43%) but remains high despite 2012 debt cancellation under the Heavily Indebted Poor Country initiative. It is forecast to gradually decline as a share of GDP due to high growth and limited budget deficits.

Improving Public Finance Management: Côte d'Ivoire is building a positive track record on fiscal policy with limited budget deficits, at 2.3% of GDP in 2013, despite a marked increase in capital spending. Fitch expects the deficit to remain below 3% of GDP up to 2015. Domestic arrears to state suppliers (1.1% of GDP) relate to the pre-2010 era and are gradually being repaid. Public Finance Management (PFM) is a weakness relative to peers, as illustrated by low and volatile budget revenue (21% of GDP) and high wages (equivalent to 34% of total revenue).

Moderate Current Account Deficit: Despite rising investment, the current account deficit was only 1.6% of GDP in 2013, reflecting a structural trade surplus (12% of GDP in 2012). The deficit is forecast to gradually increase (3.1% by 2015) due to rising investment.

Rating Sensitivities

Political Stability: Signs of deterioration in the political environment and the security situation, notably in the run-up to the 2015 presidential elections, would be rating negative.

Growth Performance: Success in implementing pro-growth structural reforms that contribute to continuing high growth in a context of macro stability would be rating positive.

Economic Policy Record: Continued moderate twin deficits supported by improvement in PFM would be rating positive. A marked rise in the twin deficits would be negative.

Summary: Strengths and Weaknesses

| Rating Factor | Macroeconomic | Public Finances | External Finances | Structural Issues |
|---------------|---------------|-----------------|-------------------|-------------------|
| Status | Strength | Neutral | Neutral | Weakness |
| Trend | Stable | Positive | Stable | Positive |

Note: Relative to 'B' category (sovereigns rated 'B+', 'B' and 'B-')

Strengths

- Franc zone membership has ensured a supportive macro environment, including a stable currency and low inflation, and rules out the risk of balance-of-payments crises. It is backed by high foreign reserves pooled at the regional level and the French guarantee on currency convertibility.
- GDP growth has recently been among the fastest in the world (9.8% in 2012, 9.1% 2013).
- The budget and current account have recorded only moderate deficits (-2.5% and -1.6% respectively in 2013) despite high public investment, reflecting fiscal prudence, the role of the private sector in the recovery and a structural trade surplus (equivalent to 12% of GDP).
- Côte d'Ivoire is the third-largest economy and second-largest industrial power in the Economic Community of West African States (ECOWAS). Its natural resources (including cocoa, oil, minerals and energy (hydro and gas)) have attracted private and external investment.

Weaknesses

- Although improving, political stability is fragile. Entrenched divisions between various groups have fed recurrent domestic conflicts since 1999. The latest erupted at end-2010 when the former president refused to relinquish power after the elections.
- PFM is weak. Côte d'Ivoire restructured its external and domestic debt in the 2011 conflict. Wages account for 34% of government receipts. The government runs arrears to suppliers. Budget receipts (21% of GDP) are low and volatile.
- Public debt, at 43% of GDP, is high relative to African peers, despite recent external debt cancellation (2012), but is in line with the 'B' peers median (43%)
- Despite some recent economic diversification, agriculture still accounts for 25% of GDP, two-thirds of employment and 70% of goods exports, and is exposed to volatility in prices.
- Indicators such as GDP per capita and the UN Human Development indicator are weaker than peers, reflecting the impact of several years of conflict on institutions and development. World Bank governance and Doing Business indicators are also weak.

Local-Currency Rating

Consistent with Fitch's sovereign methodology for countries in a currency union, the Long-Term Local-Currency IDR is 'B', the same as the Foreign-Currency IDR. Côte d'Ivoire is a member of the Union Economique et Monétaire Ouest Africaine (UEMOA). The sovereign has access to a regional capital market where it can issue treasury bills and bonds. Maturities are generally short. Côte d'Ivoire restructured its domestic debt in the wake of the 2010/2011 conflict.

Country Ceiling

Fitch assigns a 'BBB-' Country Ceiling to all countries in the UEMOA, reflecting the monetary arrangement and associated support from France (AA+). Current account transactions are mostly free, but there are controls on capital transactions outside the zone. Capital flows are free within the UEMOA, as illustrated by the recent development of the regional debt market.

Key Credit Developments

Côte d'Ivoire, a regional leader in West Africa in 1960-2000, has been markedly affected by 10 years of political instability and conflict in the 2000s. However, the security situation has greatly improved in recent years. Combined with a series of reforms, this has led to a return in confidence and buoyant investment-led GDP growth. Fitch expects Côte d'Ivoire to continue on this positive path as long as political stability prevails.

Return to Political Stability But 2015 Presidential Election Will Be a Key Test

Côte d'Ivoire enjoyed political stability after gaining independence from France as President Felix Houphouet-Boigny (1960-1993) managed to keep under his strong command various opposing domestic groups. In contrast, the 2000s were characterised by high political instability, starting with a military coup in 1999, the contested election of Laurent Gbagbo in 2000, and a civil war (2002-2007) that resulted in a division of the country. Key underlying causes of the conflict included rivalry for access to resources between the rich South and the North, issues related to Ivorian citizenship in the context of high immigration, and conflicts over land ownership.

A second conflict erupted in late 2010 when Mr Gbagbo refused to relinquish power after losing to Alassane Ouattara in the 2010 presidential election. A six-month post-electoral conflict led to 3,000 casualties and ended in a military victory for Mr Ouattara (supported by French soldiers under a UN mandate). The new president has put national reconciliation, security and pro-growth reform at the top of his agenda. The evolution in World Bank governance indicators from 2007 to 2012 illustrates the return to a more stable and business-oriented environment. The return of the headquarters of the African Development Bank (AfDB) to Abidjan in 2014 after a 10-year absence is a significant vote of confidence in Côte d'Ivoire's stability.

The next key political date will be the presidential election in October 2015. A probable scenario is that the current president will be re-elected. He will be credited with the improvement in the security situation and the marked rebound in the economy (real income per capita has increased by 12% since 2011) and will benefit from a lack of strong opposition. The main opposition party, the Front Populaire Ivoirien (FPI), has still not recovered from the loss of its leader, former President Gbagbo, who is awaiting trial at the International Court of Justice.

Given recent history, there are still risks of renewed conflict, and Fitch sees the 2015 elections as a key test of Côte d'Ivoire's return to stability. Tensions could come from a break-up of the ruling coalition or the lack of integration of the opposition into the political process (the FPI has boycotted all elections over the past three years). Recent developments, such as the setting-up of an independent electoral commission (to prepare for the upcoming elections), the law defining the status of the head of the opposition and the formal dialogue between the ruling coalition and the opposition, contribute to mitigate these risks.

Strong Growth Supported by Investment and Reforms

GDP growth has markedly accelerated since 2011, to 9.8% in 2012 and 9.1% in 2013, primarily driven by investment to rebuild infrastructure. Investment has been mostly financed by the private sector, notably in mining, agro industry, energy and construction (eg, the Bédie bridge in Abidjan). In 2013, total investment was equivalent to 16.5% of GDP, 10.3% from the private sector. About 70% of public-sector investment has been funded by development partners.

Structural reforms have also supported growth. Côte d'Ivoire was among the 10 strongest reformers in the 2014 Ease of Doing Business report, albeit starting from a very low base (scoring 167 out of 173 in 2013). Its recent graduation to Extractive Industries Transparency Initiative compliant status reflects improved governance in the commodity sector. Cocoa (15% of GDP) producers now benefit from guaranteed prices over one year and 60% of the CIF price (from as low as 40% before the reform) ensuring them a higher and more stable income.

Figure 5

Real GDP growth
y/y % change

Source: Fitch, National authorities

Fitch expects GDP growth to remain strong, at 9.0% in 2014 and 8.5% in 2015. The current investment plan targets infrastructure (roads, bridges and dams) and will support the private sector and regional integration (eg, the current building of a motorway between Abidjan and Lagos) within the ECOWAS (potential market of 300m consumers). The largely untapped mining potential should also develop over the long term. Oil (7% of government receipts, 18% of current account receipts in 2013) will only moderately add to growth in the medium term.

As the economic recovery is largely the result of the improvement in the political and security environment, the main risk to the scenario is renewed conflict or insecurity. Lower official external financing, as Côte d'Ivoire is no longer perceived to be in an emergency situation, or due to a weaker global environment, could also affect prospects.

Poor Debt Service History Related to Political Instability

In the context of the 2010/2011 post-electoral conflict and associated fiscal and financial stress, Côte d'Ivoire accumulated arrears with its external creditors (including the Paris Club, the World Bank, the AfDB and Eurobond holders). However, by the end of 2012, Côte d'Ivoire had normalised relations with all of its external creditors.

Three coupon payments on its USD2.3bn 2032 Eurobond were missed (for a total of USD98m). The Eurobond had been issued to London Club creditors in 2010 (as part of a restructuring of ex-Brady bonds issued in 1998 and on which Côte d'Ivoire had defaulted in 2000). The default occurred despite ample reserve cover due to insufficient fiscal resources to access FX from the central bank. The missed coupon payments were restructured in 2012 (including an USD11m good faith payment in 2012). Debt service on the Eurobond has been clean since June 2012.

Figure 6

Central Government Debt
As a % of GDP

Source: Fitch, National authorities

Payments to the AfDB and the World Bank resumed in May 2011. Côte d'Ivoire reached completion point under the HIPC initiative in June 2012 and benefited from debt cancellation by Paris Club bilateral creditors and multilateral creditors. At end-2012, Côte d'Ivoire settled the two last unresolved external claims with private creditors (through a USD0.2bn tap of the 2032 Eurobond). Public external debt declined to 31% of GDP at end-2012 from 55% in 2011.

During the conflict, Côte d'Ivoire also stopped servicing domestic debt. However, the regional central bank (in charge of the regional market for treasury bills) reached agreement with creditors to roll over maturing bills during the six months of the conflict. In March 2012, the rolled-over debt was restructured into securities (totalling CFA602bn, or 4% of GDP) with longer maturities (three to five years). The capitalised interest (CFA24bn, or 0.2% of GDP) was paid to creditors in 2012.

Figure 7

External Debt by Creditors
In USDbn, at end-2013

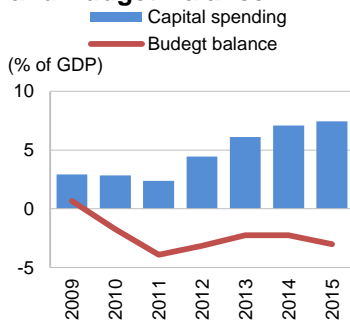

Source: Fitch, MoF

Total public debt was 43.8% of GDP at end-2013 (26.4% external and 17.3% domestic). Half of external debt is official bilateral loans (80% of which are from France and have been converted into Debt for Development (C2D) swaps¹), the 2032 Eurobond accounts for 31% of debt, and the remainder is owed to multilaterals. Domestic debt is made of treasury bills and bonds. Maturities are generally short (two to three years, but up to a maximum of eight years). Domestic debt includes arrears to the central bank (CFA249bn, or 1.6% of GDP) mostly dating from the early 2000s when the regional central bank stopped statutory advances to countries.

Fitch expects debt to be 41% of GDP by 2015 (including a new USD500m Eurobond, equivalent to 1.8% of GDP) and to gradually decline over the longer term, reflecting moderate deficits (primary balance averaging -1.7% of GDP), high growth (8.6%) and C2D repayment. Clean debt repayment since mid-2012 augurs well for future debt service payment. The main risk to debt servicing is potential deterioration in the political environment.

¹ Contrats de Désendettement et Développement or C2D. This is a development support mechanism by which France agrees on a schedule for repayment of bilateral claims and transfers back to Côte d'Ivoire the debt repayments (two weeks after it has been reimbursed) in the form of grants to finance development projects. Total claims falling under this mechanism were EUR2.3bn in 2013, or XOF1440bn (9% of GDP).

Improving Public Finance Management from a Low Base

A key objective is to increase budget revenues (20.7% of GDP in 2014 vs a 'B' peers median of 26%). The main policies include tackling tax evasion, reducing current exemptions on VAT, and increasing the number of SMEs paying taxes. In 2013, budget revenues exceeded their target, reflecting the initial impact of reforms as well as stronger-than-expected growth.

On the spending side, key reforms include the restructuring and privatisation of public companies (the cost for bank recapitalisation is estimated at CFA70bn, or 0.4% of GDP). Wage reforms could gradually reduce the wage bill to 35% of fiscal receipts by 2020 (from 44% currently, and 34% of government revenues), although wages will increase in 2014 and 2015.

Total arrears to state suppliers were estimated at XOF153bn (1.1% of GDP) in 2013. The authorities repaid XOF57bn in 2013 and plan gradual discounted repayments over the coming years. There have been no new domestic arrears since 2013, but the missed indicative target on floating debt (ie, overdue obligations to suppliers for which the payment date does not exceed 90 days) in the IMF's latest assessment reflects ongoing challenges to pay suppliers on time.

The new administration is building a positive track record on budget policy. Despite a marked increase in capital spending since 2011, the budget deficit has remained limited, at 2.3% of GDP in 2013. Targets on the primary balance set by the IMF have been met. Fitch expects the deficit of the central government to remain below 3% of GDP up to 2015 despite potential spending slippage related to elections. The deficit will be financed on the regional market and by external official and private creditors. The recent upgrade of the country in the World Bank's Country Policy Institutional Assessment should support access to more multilateral funding.

Monetary Arrangement and High Trade Surplus Ensure Strong External Position

The CFA franc has a fixed exchange rate with the euro (XOF656.0/EUR1.0). To support the peg, the French Treasury guarantees full convertibility and, if needed, would provide external liquidity through an unlimited overdraft on the central bank's account. Foreign reserves are pooled at the regional level for the eight countries of the UEMOA and have been high in recent years (equivalent to 5.5 months of imports in the sub region).

Côte d'Ivoire's current account was in deficit in 2012 (for the first time in five years) due to strong imports for reconstruction. However, the trade balance has remained in large surplus (12% of GDP), reflecting a strong export base including cocoa (28% of merchandise exports), oil (21%), rubber (6%), gold (4%) and coffee (1%). 20% of exported products are processed domestically, reflecting a relatively developed industrial capacity, and adding value to exports. Continuing high investment will keep the current account in deficit up to 2015.

Liquid Banks Expand Credit but Operating Environment Remains Challenging

The overall banking sector is well capitalised by regional standards and liquid (loans/deposits ratio of 79% in 2013), but public banks (which account for 22% of total banking assets) are weaker. The capital adequacy ratio was 9.2% in 2013, driven down by low ratios at some public banks that need recapitalisation. Non-performing loans were 12.7% of total loans in 2013 (74% of which are provisioned).

Financial depth is limited: only 11% of the population has a bank account and private-sector credit is equivalent to 19% of GDP. Despite excess liquidity, banks have been reluctant to lend due to credit risk, a lack of infrastructure to assess the credit quality of borrowers, and the generally weak institutional environment. However, credit to the private sector is now growing fast, at 23% in 2013, driven by high GDP growth and the more secure environment.

Monetary conditions are easing, with two cuts in the policy rate (to 2.5%) in 2013 in a context of low inflation (2.6% in 2013). However, excess bank liquidity means that the impact of a change in the policy rate on lending rates is limited.

Fitch uses stylised projections for a sovereign's gross general government debt/GDP ratio to illustrate the sustainability of its debt burden and its sensitivity to economic growth, the cost of borrowing, fiscal policy and the exchange rate.

Public Debt Dynamics

According to Fitch's baseline projections, central government debt should gradually decline to 37% of GDP by 2022, as a result of continued high GDP growth and moderate budget deficits. Lower-than-expected GDP growth (averaging 5% in the longer term vs 8.6% in the baseline) would cause debt to rise as a percentage of GDP.

Debt Dynamics – Fitch's Baseline Assumptions

| | 2013 | 2014 | 2015 | 2016 | 2017 | 2018 | 2022 |
|--|------|------|------|------|------|------|------|
| Gross general government debt (% GDP) | 43.8 | 42.9 | 41.3 | 39.5 | 38.7 | 38.1 | 36.5 |
| Primary balance (% of GDP) | -0.9 | -1.0 | -1.7 | -1.6 | -1.6 | -1.7 | -2.0 |
| Real GDP growth (%) | 9.1 | 9.0 | 8.5 | 8.5 | 8.5 | 8.5 | 8.5 |
| Avg. nominal effective interest rate (%) | 3.1 | 3 | 3.0 | 3.0 | 4.0 | 4.0 | 4.0 |
| XOF/USD (annual avg.) | 494 | 494 | 494 | 494 | 494 | 494 | 494 |
| GDP deflator (%) | 2.4 | 1.2 | 2.0 | 2.0 | 2.0 | 2.0 | 2.0 |

In issuing and maintaining its ratings, Fitch relies on factual information it receives from issuers and underwriters and from other sources Fitch believes to be credible. Fitch conducts a reasonable investigation of the factual information relied upon by it in accordance with its ratings methodology, and obtains reasonable verification of that information from independent sources, to the extent such sources are available for a given security or in a given jurisdiction. The manner of Fitch's factual investigation and the scope of the third-party verification it obtains will vary depending on the nature of the rated security and its issuer, the requirements and practices in the jurisdiction in which the rated security is offered and sold and/or the issuer is located, the availability and nature of relevant public information, access to the management of the issuer and its advisers, the availability of pre-existing third-party verifications such as audit reports, agreed-upon procedures letters, appraisals, actuarial reports, engineering reports, legal opinions and other reports provided by third parties, the availability of independent and competent third-party verification sources with respect to the particular security or in the particular jurisdiction of the issuer, and a variety of other factors. Users of Fitch's ratings should understand that neither an enhanced factual investigation nor any third-party verification can ensure that all of the information Fitch relies on in connection with a rating will be accurate and complete. Ultimately, the issuer and its advisers are responsible for the accuracy of the information they provide to Fitch and to the market in offering documents and other reports. In issuing its ratings Fitch must rely on the work of experts, including independent auditors with respect to financial statements and attorneys with respect to legal and tax matters. Further, ratings are inherently forward-looking and embody assumptions and predictions about future events that by their nature cannot be verified as facts. As a result, despite any verification of current facts, ratings can be affected by future events or conditions that were not anticipated at the time a rating was issued or affirmed.

The information in this report is provided "as is" without any representation or warranty of any kind. A Fitch rating is an opinion as to the creditworthiness of a security. This opinion is based on established criteria and methodologies that Fitch is continuously evaluating and updating. Therefore, ratings are the collective work product of Fitch and no individual, or group of individuals, is solely responsible for a rating. The rating does not address the risk of loss due to risks other than credit risk, unless such risk is specifically mentioned. Fitch is not engaged in the offer or sale of any security. All Fitch reports have shared authorship. Individuals identified in a Fitch report were involved in, but are not solely responsible for, the opinions stated therein. The individuals are named for contact purposes only. A report providing a Fitch rating is neither a prospectus nor a substitute for the information assembled, verified and presented to investors by the issuer and its agents in connection with the sale of the securities. Ratings may be changed or withdrawn at any time for any reason in the sole discretion of Fitch. Fitch does not provide investment advice of any sort. Ratings are not a recommendation to buy, sell, or hold any security. Ratings do not comment on the adequacy of market price, the suitability of any security for a particular investor, or the tax-exempt nature or taxability of payments made in respect to any security. Fitch receives fees from issuers, insurers, guarantors, other obligors, and underwriters for rating securities. Such fees generally vary from US\$1,000 to US\$750,000 (or the applicable currency equivalent) per issue. In certain cases, Fitch will rate all or a number of issues issued by a particular issuer, or insured or guaranteed by a particular insurer or guarantor, for a single annual fee. Such fees are expected to vary from US\$10,000 to US\$1,500,000 (or the applicable currency equivalent). The assignment, publication, or dissemination of a rating by Fitch shall not constitute a consent by Fitch to use its name as an expert in connection with any registration statement filed under the United States securities laws, the Financial Services and Markets Act 2000 of the United Kingdom, or the securities laws of any particular jurisdiction. Due to the relative efficiency of electronic publishing and distribution, Fitch research may be available to electronic subscribers up to three days earlier than to print subscribers.
